

Why It Works: Insider Secrets to Great Foods for Kids
Presented by Kevin Ryan, PhD

Inspiring and engaging young minds is a challenge even for the most accomplished teacher. In order to be prepared for tomorrow's jobs, today's students must be proficient in multiple subject areas. However, how do you spark an interest within them for such diverse thinking? One way is through food. Food can be a Rosetta stone of instruction for today's students, harnessing curiosity and real world applications for tomorrow's needs. Science, history and even anthropology are just a few of the multiple disciplines that a food service operator can integrate into students lives through the engaging medium of food. Using simple and inexpensive displays and interactive experiments, the cafeteria can become not a break from learning but a catalyst for instruction.
